Problem – Solution Fit Template

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps identify behavioral patterns and recognize what would work and why.

Canvas

1. Customer Segment(s)	6. Customer Constraints	5. Available Solutions
Health-conscious individuals; people with specific fitness goals (weight loss/gain/muscle building); users managing dietary restrictions or medical conditions.	Limited nutrition knowledge; no access to a personal dietitian; little time for manual calorie counting; unwillingness to pay for premium calorie-tracking apps.	Generic calorie-counting apps, fitness-influencer content, manual spreadsheets, or paid one-off dietitian consultations.

2. Jobs-to-be-done / Problems	9. Problem Root Cause	7. Behaviour
Track daily calories, macros and water intake accurately; get a personalized calorie target; find healthy recipes that match dietary needs.	Nutrition tracking tools are fragmented — calculators, food databases, recipe search and expert guidance live in separate apps with no shared user profile.	Searches "how many calories should I eat"; downloads multiple apps; abandons tracking after a few days due to tedious manual entry.

3. Triggers	4. Emotions: Before / After	10. Your Solution
New Year's resolution; doctor's advice; an upcoming event; noticing a change in weight or energy levels.	Before: overwhelmed, unsure, guilty about food choices. After: confident, in control, motivated by visible progress.	A single MERN platform combining physical calculators, food/water tracking with auto-computed totals, recipe discovery, meal planning, and an AI nutrition chatbot under one user profile.

8. Channels of Behaviour
Web application (React); AI chat interface within the app; dashboard reminders driven by the configurable reminder interval in Settings.
