Customer Journey Map

A customer journey map visualizes the end-to-end experience a user has with Nutrition Assistant, from first becoming aware of the platform through to daily tracking and long-term habit-building. It highlights what the user does, thinks, and feels at each stage, and surfaces opportunities to improve the experience.

Stage	Entice	Enter	Engage	Exit	Extend
Steps	Sees a friend's recommendation, fitness influencer post, or searches "diet and water tracker app"	Visits the Nutrition Assistant landing page; browses feature highlights (calculators, tracker, AI chatbot)	Registers/logs in; fills profile (age, weight, height, goal, activity level); uses BMI/Calorie calculators; logs food and water daily; chats with the AI Nutrition Assistant; browses recipes	Reviews the daily dashboard summary and goal progress; closes the app satisfied after logging a meal	Returns daily to log meals/water; checks weekly trend charts; adjusts calorie goal from the Calorie Calculator; revisits favorite recipes
Interactions	Social media / word of mouth / search engine	Nutrition Assistant public landing page (React web app)	Registration/login form; BMI & Calorie Calculator pages; Daily Tracker (food & water); AI Assistant chat; Recipe Explorer & Favorites	Dashboard summary cards; weekly progress chart	Dashboard; Nutrition Stats page; Settings (reminders, units, dark mode)
Goals & Motivations	Help me find a trustworthy way to manage my diet	Help me understand what Nutrition Assistant offers	Help me get an accurate calorie/BMI target and track my day easily	Help me feel confident I am on track with my goal	Help me build a lasting healthy habit and see my progress over time
Positive Moments	Reassured by a clear, feature-rich landing page describing calculators, tracking and AI guidance	Clean, simple registration and dashboard experience	Instant BMI/BMR/TDEE results and auto-calculated daily nutrition totals make tracking feel effortless	Dashboard clearly shows calories, water, and BMI progress at a glance	Weekly trend charts and goal-based recommendations keep the user engaged
Negative Moments	Unsure whether the app's guidance is trustworthy before signing up	No major friction — registration flow is minimal	AI Assistant sometimes falls back to a rule-based response when the Gemini API quota/key is unavailable	No push/email alerts yet if the user forgets to log water for the day	No wearable-device sync yet to auto-import steps or heart-rate data
Areas of Opportunity	Add visible trust signals (e.g. nutrition-science backing) earlier in the funnel	Offer a guided first-time tour of the calculators and tracker	Add push/email reminders tied to the configurable reminder interval in Settings	Integrate wearable devices for automatic activity and calorie-burn data	Build an AI-personalized weekly meal plan based on logged history
